the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. As life expectancy increases, the number of children who survive to adulthood increases. This is because more children are surviving to adulthood, and therefore more children are being born. Another factor is the increase in the number of children who are born to women who are younger than 20 years of age. This is because more women are having children at a younger age, and therefore more children are being born.

The increase in the number of children in the world is a major concern for the United Nations. The United Nations (1999) has identified a number of factors that are likely to contribute to the increase in the number of children in the world. These factors include the increase in life expectancy, the increase in the number of children who are born to women who are younger than 20 years of age, and the increase in the number of children who are born to women who are older than 35 years of age.

The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world. These factors include the increase in life expectancy, the increase in the number of children who are born to women who are younger than 20 years of age, and the increase in the number of children who are born to women who are older than 35 years of age. The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world.

The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world. These factors include the increase in life expectancy, the increase in the number of children who are born to women who are younger than 20 years of age, and the increase in the number of children who are born to women who are older than 35 years of age. The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world.

The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world.

The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world. These factors include the increase in life expectancy, the increase in the number of children who are born to women who are younger than 20 years of age, and the increase in the number of children who are born to women who are older than 35 years of age. The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world.

The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world. These factors include the increase in life expectancy, the increase in the number of children who are born to women who are younger than 20 years of age, and the increase in the number of children who are born to women who are older than 35 years of age. The United Nations (1999) has also identified a number of factors that are likely to contribute to the increase in the number of children in the world.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations 1999). The number of people aged 65 and over is projected to increase to 1.1 billion by the year 2050 (United Nations 1999).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The World Health Organization (WHO) has developed a 'Global Strategy on Ageing and Health' (WHO 1999) which aims to 'enable older people to live lives of dignity, autonomy and well-being, and to contribute to the development of their societies'. The WHO strategy is based on the following principles: (1) older people should be seen as a resource, not a burden; (2) older people should be able to live independently and actively; (3) older people should be able to participate in the life of their communities; (4) older people should be able to live in their own homes; (5) older people should be able to live in a safe and secure environment; (6) older people should be able to live in a supportive environment; (7) older people should be able to live in a healthy environment; (8) older people should be able to live in a peaceful environment; (9) older people should be able to live in a just environment; (10) older people should be able to live in a sustainable environment.

The WHO strategy is based on the following principles: (1) older people should be seen as a resource, not a burden; (2) older people should be able to live independently and actively; (3) older people should be able to participate in the life of their communities; (4) older people should be able to live in their own homes; (5) older people should be able to live in a safe and secure environment; (6) older people should be able to live in a supportive environment; (7) older people should be able to live in a healthy environment; (8) older people should be able to live in a peaceful environment; (9) older people should be able to live in a just environment; (10) older people should be able to live in a sustainable environment.

The WHO strategy is based on the following principles: (1) older people should be seen as a resource, not a burden; (2) older people should be able to live independently and actively; (3) older people should be able to participate in the life of their communities; (4) older people should be able to live in their own homes; (5) older people should be able to live in a safe and secure environment; (6) older people should be able to live in a supportive environment; (7) older people should be able to live in a healthy environment; (8) older people should be able to live in a peaceful environment; (9) older people should be able to live in a just environment; (10) older people should be able to live in a sustainable environment.
