the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own aims and objectives. The public sector is also funded by the government, and this has implications for the way in which it is managed and the way in which it is funded.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. As life expectancy increases, the number of children who survive to adulthood increases. This is because more children are surviving to the age of 15, and more children are surviving to the age of 20. This is also true for children who survive to the age of 25 and beyond.

Another factor that is likely to contribute to the increase in the number of children in the world is the increase in the number of children who are born to women who are under 20 years of age. This is because more women are having children at a younger age, and more women are having children who are under 15 years of age. This is also true for women who are having children who are under 20 years of age.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. As life expectancy increases, the number of children who survive to adulthood increases. This is because more children are surviving to the age of 15, and more children are surviving to the age of 20. This is also true for children who survive to the age of 25 and beyond.

Another factor that is likely to contribute to the increase in the number of children in the world is the increase in the number of children who are born to women who are under 20 years of age. This is because more women are having children at a younger age, and more women are having children who are under 15 years of age. This is also true for women who are having children who are under 20 years of age.
