the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the quality of care in the public sector. The Department of Health (1996) has set out a number of key objectives for the public sector, including the need to improve the quality of care, to reduce waiting times, to improve the efficiency of the system, and to improve the financial position of the public sector. The Department of Health (1996) has also set out a number of key principles for the public sector, including the need to be patient-centred, to be transparent, to be accountable, and to be efficient.

The Department of Health (1996) has also set out a number of key strategies for the public sector, including the need to improve the quality of care, to reduce waiting times, to improve the efficiency of the system, and to improve the financial position of the public sector. The Department of Health (1996) has also set out a number of key principles for the public sector, including the need to be patient-centred, to be transparent, to be accountable, and to be efficient.

The Department of Health (1996) has also set out a number of key strategies for the public sector, including the need to improve the quality of care, to reduce waiting times, to improve the efficiency of the system, and to improve the financial position of the public sector. the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are malnourished has increased from 1.1 billion to 1.5 billion (FAO 2001).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a target of reducing the number of undernourished people in the world by 50% by the year 2015 (WHO 2001).

One of the main causes of malnutrition is the lack of access to adequate food. This is often due to poverty, which prevents people from being able to afford to buy enough food. Another cause is the lack of access to land, which prevents people from being able to grow their own food.

There are a number of ways in which the nutritional status of the world's population can be improved. One way is to increase the production of food. This can be done by increasing the area of land that is used for agriculture, or by increasing the yield of crops.

Another way to improve the nutritional status of the world's population is to improve the distribution of food. This can be done by ensuring that food is available to all people, and that it is distributed in a way that is fair and equitable.

There are a number of other ways in which the nutritional status of the world's population can be improved. These include improving the quality of food, and ensuring that people have access to adequate health care.

It is important to note that improving the nutritional status of the world's population is a complex task. It requires the cooperation of many different groups, including governments, the private sector, and civil society.

However, if we can improve the nutritional status of the world's population, we can help to reduce the number of people who are undernourished and malnourished. This will help to improve the health and well-being of the world's population, and will help to create a more sustainable future.

There are a number of challenges that we face in improving the nutritional status of the world's population. These include the need to increase food production, the need to improve food distribution, and the need to improve the quality of food.

However, if we can overcome these challenges, we can help to improve the nutritional status of the world's population. This will help to reduce the number of people who are undernourished and malnourished, and will help to create a more sustainable future.

It is important to note that improving the nutritional status of the world's population is a long-term goal. It will take many years to achieve, and it will require the continued effort of many different groups.

However, if we can improve the nutritional status of the world's population, we can help to reduce the number of people who are undernourished and malnourished. This will help to improve the health and well-being of the world's population, and will help to create a more sustainable future.

There are a number of ways in which we can improve the nutritional status of the world's population. These include increasing food production, improving food distribution, and improving the quality of food.

However, if we can improve the nutritional status of the world's population, we can help to reduce the number of people who are undernourished and malnourished. This will help to improve the health and well-being of the world's population, and will help to create a more sustainable future.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the life expectancy of people in the world. As people live longer, they are more likely to have children. Another factor is the increase in the number of people who are in the reproductive age group (15-49 years of age). The number of people in this age group is projected to increase to 3.5 billion by the year 2050 (United Nations 1999).

The increase in the number of children in the world is a major challenge for the world's governments. The United Nations (1999) has identified a number of key areas where the world's governments need to focus their efforts. These areas include: (1) improving the health and education of children, (2) reducing the number of children who are in poverty, and (3) increasing the number of children who are employed.

The United Nations (1999) has also identified a number of key areas where the world's governments need to focus their efforts. These areas include: (1) improving the health and education of children, (2) reducing the number of children who are in poverty, and (3) increasing the number of children who are employed. The United Nations (1999) has also identified a number of key areas where the world's governments need to focus their efforts. the 1990s, the number of people in the world who are undernourished has increased from 250 million to 800 million (FAO 2001). The number of people who are obese has increased from 100 million in 1975 to 300 million in 1995 (WHO 1997).

Obesity is a complex condition, and the aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. The energy balance is determined by the interaction of genetic, environmental and behavioural factors.

Obesity is a major public health problem because it is associated with a number of chronic diseases, including coronary heart disease, stroke, type 2 diabetes, and certain types of cancer (WHO 1997). It is also a major cause of disability and premature death.

The prevalence of obesity has increased in many countries over the past few decades. In the United Kingdom, the prevalence of obesity in adults has increased from 10% in 1980 to 15% in 1995 (Health Survey for England 1995).
