the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999) (Department of Health 2000).

There is a growing emphasis on the need to improve the efficiency of the public sector, and to ensure that the public sector is able to deliver the best possible value for money (Department of Health 2000).

The public sector is also facing a number of challenges, including a growing demand for services, a need to improve the quality of care, and a need to reduce costs (Department of Health 2000).

The public sector is also facing a number of challenges, including a growing demand for services, a need to improve the quality of care, and a need to reduce costs (Department of Health 2000).

The public sector is also facing a number of challenges, including a growing demand for services, a need to improve the quality of care, and a need to reduce costs (Department of Health 2000).

The public sector is also facing a number of challenges, including a growing demand for services, a need to improve the quality of care, and a need to reduce costs (Department of Health 2000).

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996). The number of people who are malnourished has increased from 1.1 billion to 1.5 billion (FAO 1996).

There are a number of reasons why the number of people who are undernourished has increased. One of the main reasons is that the world population has increased. The world population is now over 6 billion and is expected to reach 9 billion by the year 2050 (FAO 1996).

Another reason why the number of people who are undernourished has increased is that the world's food supply is not keeping pace with the world's population. The world's food supply is estimated to be 1.5 billion tonnes per year, which is not enough to feed the world's population of 6 billion people (FAO 1996).

A third reason why the number of people who are undernourished has increased is that the world's food supply is not distributed evenly. In some parts of the world, there is a surplus of food, while in other parts, there is a shortage. This is due to a number of factors, including differences in climate, soil, and technology (FAO 1996).

There are a number of ways in which the world's food supply can be increased. One way is to increase the amount of land that is used for agriculture. Another way is to increase the amount of food that is produced on the same amount of land. This can be done by using better farming techniques and by using more efficient fertilizers and pesticides (FAO 1996).

There are also a number of ways in which the world's food supply can be distributed more evenly. One way is to reduce the amount of food that is wasted. Another way is to increase the amount of food that is stored. This can be done by using better storage techniques and by using more efficient transport systems (FAO 1996).

There are a number of ways in which the world's food supply can be made more sustainable. One way is to use less land for agriculture. Another way is to use less water for agriculture. This can be done by using better irrigation techniques and by using more efficient fertilizers and pesticides (FAO 1996).

There are a number of ways in which the world's food supply can be made more affordable. One way is to reduce the cost of food. Another way is to increase the amount of food that is produced. This can be done by using better farming techniques and by using more efficient fertilizers and pesticides (FAO 1996).

There are a number of ways in which the world's food supply can be made more secure. One way is to reduce the risk of food shortages. Another way is to increase the amount of food that is stored. This can be done by using better storage techniques and by using more efficient transport systems (FAO 1996).

There are a number of ways in which the world's food supply can be made more healthy. One way is to reduce the amount of food that is contaminated. Another way is to increase the amount of food that is produced. This can be done by using better farming techniques and by using more efficient fertilizers and pesticides (FAO 1996).

There are a number of ways in which the world's food supply can be made more sustainable. One way is to use less land for agriculture. Another way is to use less water for agriculture. the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own aims and objectives. The public sector is also funded by the government, and this has implications for the way in which it is managed and the way in which it is funded.
