the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The United Nations predicts that by the year 2025, the number of people under 15 years of age will increase to 2.5 billion (United Nations 1999). The United Nations also predicts that the number of people aged 65 years and over will increase from 250 million in 1990 to 1 billion in 2025 (United Nations 1999).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 years and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 71 years for men and 76 years for women. By 2025, the life expectancy at birth is predicted to be 75 years for men and 80 years for women (United Nations 1999). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a more active lifestyle.

Another factor that is likely to contribute to the increase in the number of people aged 65 years and over is the decrease in fertility. In 1990, the total fertility rate was 2.8 children per woman. By 2025, the total fertility rate is predicted to be 1.5 children per woman (United Nations 1999). This decrease in fertility is due to a number of factors, including a decrease in the age at which women have children, a decrease in the number of children born to each woman, and a decrease in the number of women who have children.

The increase in the number of people aged 65 years and over is a global phenomenon. In 1990, there were 250 million people aged 65 years and over in the world. By 2025, there are predicted to be 1 billion people aged 65 years and over in the world (United Nations 1999). This increase in the number of people aged 65 years and over is a significant challenge for many countries, particularly in the developing world.

One of the main challenges is the need for more social security and health care services for the elderly. In many countries, the elderly are not able to support themselves and rely on family members for support. In the future, as the number of people aged 65 years and over increases, there will be a need for more social security and health care services to support the elderly.

Another challenge is the need for more housing and transportation services for the elderly. In many countries, the elderly are not able to afford to live in their own homes and are forced to live in overcrowded conditions. In the future, as the number of people aged 65 years and over increases, there will be a need for more housing and transportation services to support the elderly.

The increase in the number of people aged 65 years and over is a significant challenge for many countries. It is important that we take action now to address this challenge. We need to improve social security and health care services for the elderly, and we need to improve housing and transportation services for the elderly. We need to make sure that the elderly are able to live a dignified and secure life in the future.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The United Nations predicts that by the year 2025, the number of people under 15 years of age will increase to 2.5 billion (United Nations 1999). The United Nations also predicts that by the year 2025, the number of people aged 65 years and over will increase to 1.2 billion (United Nations 1999).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 years and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 71 years for men and 76 years for women. By the year 2025, the life expectancy at birth is predicted to be 75 years for men and 80 years for women (United Nations 1999). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a more active lifestyle.

Another factor that is likely to contribute to the increase in the number of people aged 65 years and over is the decrease in fertility. In 1990, the total fertility rate was 2.8 children per woman. By the year 2025, the total fertility rate is predicted to be 1.5 children per woman (United Nations 1999). This decrease in fertility is due to a number of factors, including a decrease in the age at which women have children, a decrease in the number of children born to each woman, and a decrease in the number of women who have children.

The increase in the number of people aged 65 years and over is a global phenomenon. In 1990, there were 450 million people aged 65 years and over in the world. By the year 2025, there are predicted to be 1.2 billion people aged 65 years and over in the world (United Nations 1999). This increase in the number of people aged 65 years and over is a significant challenge for many countries, particularly in the developing world.

One of the main challenges is the need for more social security and health care services for the elderly. In many countries, the elderly are not able to support themselves and rely on family members for support. In some countries, the elderly are not able to afford the health care services that they need. This is a significant problem, particularly in the developing world, where the elderly are often the most vulnerable members of society.

Another challenge is the need for more housing and transportation services for the elderly. In many countries, the elderly are not able to afford the housing and transportation services that they need. This is a significant problem, particularly in the developing world, where the elderly are often the most vulnerable members of society.

The increase in the number of people aged 65 years and over is a significant challenge for many countries. It is a challenge that requires a coordinated effort from governments, the private sector, and civil society. We need to find ways to support the elderly and to ensure that they are able to live a dignified and healthy life.

There are a number of ways that we can support the elderly. One way is to provide social security and health care services. Another way is to provide housing and transportation services. We can also provide other services, such as meal delivery and companionship services. These services can help to improve the quality of life for the elderly and to ensure that they are able to live a dignified and healthy life.

The increase in the number of people aged 65 years and over is a significant challenge for many countries. It is a challenge that requires a coordinated effort from governments, the private sector, and civil society. We need to find ways to support the elderly and to ensure that they are able to live a dignified and healthy life.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own aims and objectives. The public sector is also funded by the government, and this has implications for the way in which it is managed and the way in which it is funded.
