the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–2000) and is projected to increase by a further 1.5 million by 2020 (Office for National Statistics 2001). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 in the USA (U.S. Census Bureau 2000). The ageing of the population is a global phenomenon, with the number of people aged 65 and over projected to increase by 1.5 billion by 2020 (U.S. Census Bureau 2000).

There is a growing awareness of the need to address the health and social care needs of the ageing population. The World Health Organization (WHO) has identified ageing as one of the major public health challenges of the 21st century (WHO 2002). The WHO has developed a framework for addressing the health and social care needs of the ageing population, which is based on the principles of active ageing (WHO 2002). Active ageing is defined as the process of optimising health and social care outcomes for older people, taking into account their physical, mental, and social well-being (WHO 2002).

The WHO framework for active ageing is based on three pillars: health, social participation, and security (WHO 2002). Health is defined as the state of complete physical, mental, and social well-being, not merely the absence of disease or infirmity (WHO 1948). Social participation is defined as the ability to participate in social activities and to contribute to society (WHO 2002). Security is defined as the ability to meet one's basic needs and to live in a safe and secure environment (WHO 2002).

The WHO framework for active ageing is based on the principle of 'ageism', which is defined as the process of stereotyping and discriminating against older people (WHO 2002). Ageism is a social problem that affects the health and social care of older people. The WHO has identified ageism as one of the major barriers to achieving active ageing (WHO 2002). The WHO has developed a strategy for addressing ageism, which is based on the principles of respect, dignity, and equality (WHO 2002).

The WHO strategy for addressing ageism is based on three pillars: awareness, education, and action (WHO 2002). Awareness is defined as the process of raising awareness of the health and social care needs of older people (WHO 2002). Education is defined as the process of providing older people with the information and skills they need to live healthy and active lives (WHO 2002). Action is defined as the process of implementing policies and programmes that address the health and social care needs of older people (WHO 2002).

The WHO strategy for addressing ageism is based on the principle of 'ageism', which is defined as the process of stereotyping and discriminating against older people (WHO 2002). the 'information' and 'communication' fields. The 'information' field is defined as:

...the study of the nature, uses and functions of information, and the ways in which it is created, communicated, evaluated and used. (p. 1)

The 'communication' field is defined as:

...the study of the nature, uses and functions of communication, and the ways in which it is created, communicated, evaluated and used. (p. 1)

These definitions are very broad and cover a wide range of topics. They are also very similar to each other, which suggests that the two fields are closely related.

The number of people aged 65 and over in the UK is projected to increase by 2.5 million by 2020 (Office for National Statistics 2001).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The World Health Organization (WHO) has developed a 'Global Strategy on Ageing and Health' (WHO 1999) which aims to 'enable older people to live longer, healthier, and more active lives'. The WHO has also developed a 'Global Strategy on the Prevention of Falls in Older People' (WHO 2001) which aims to 'reduce the risk of falls and the consequences of falls in older people'.

The WHO has also developed a 'Global Strategy on the Prevention of Falls in Older People' (WHO 2001) which aims to 'reduce the risk of falls and the consequences of falls in older people'.
