the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are malnourished has increased from 1.1 billion to 1.5 billion (FAO 2001).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a target of reducing the number of undernourished people in the world by 50% by the year 2015 (WHO 2001).

One of the main causes of malnutrition is the lack of access to food. In many parts of the world, people do not have enough food to eat. This is often due to a lack of access to land and water, and to a lack of access to markets and services.

Another main cause of malnutrition is the lack of access to health care. In many parts of the world, people do not have access to health care services. This is often due to a lack of access to health facilities and to a lack of access to health personnel.

There are many other causes of malnutrition, including a lack of access to education and to information. In many parts of the world, people do not know how to grow food or how to cook food. This is often due to a lack of access to education and to information.

There are many ways to improve the nutritional status of the world's population. One way is to increase access to food. This can be done by providing people with access to land and water, and by providing people with access to markets and services.

Another way to improve the nutritional status of the world's population is to increase access to health care. This can be done by providing people with access to health facilities and to health personnel.

There are many other ways to improve the nutritional status of the world's population. These include providing people with access to education and to information, and providing people with access to health care services.

It is important to note that malnutrition is a complex problem. It is not simply a matter of providing people with food. It is also a matter of providing people with access to health care, education, and information.

There are many ways to improve the nutritional status of the world's population. It is important to find ways to increase access to food, health care, education, and information.

There are many ways to improve the nutritional status of the world's population. It is important to find ways to increase access to food, health care, education, and information.

There are many ways to improve the nutritional status of the world's population. It is important to find ways to increase access to food, health care, education, and information.

There are many ways to improve the nutritional status of the world's population. It is important to find ways to increase access to food, health care, education, and information.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are malnourished has increased from 1.1 billion to 1.5 billion (FAO 2001).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a target of reducing the number of undernourished people in the world by 50% by the year 2015 (WHO 2001).

One of the main causes of malnutrition is the lack of access to food. In many parts of the world, people do not have enough food to eat. This is often due to a lack of access to land and water, and to a lack of access to markets and services.

Another main cause of malnutrition is the lack of access to health care. In many parts of the world, people do not have access to health care services. This is often due to a lack of access to health facilities and to a lack of access to health personnel.

There are many other causes of malnutrition, including a lack of access to education and to information. In many parts of the world, people do not know how to grow food or how to cook food. This is often due to a lack of access to education and to information.

There are many ways to improve the nutritional status of the world's population. One way is to increase access to food. This can be done by providing people with access to land and water, and by providing people with access to markets and services.

Another way to improve the nutritional status of the world's population is to increase access to health care. This can be done by providing people with access to health facilities and to health personnel.

There are many other ways to improve the nutritional status of the world's population. These include providing people with access to education and to information, and providing people with access to health care services.

It is important to note that malnutrition is a complex problem. It is not simply a matter of providing people with food. It is also a matter of providing people with access to health care, education, and information.

There are many ways to improve the nutritional status of the world's population. It is important to find ways to increase access to food, health care, education, and information.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed. The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed.

The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed. The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed. The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed.

The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed. The public sector is now a major employer in the UK, and this has implications for the way in which the public sector is managed.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion (UNEP 1999).

There is a growing awareness of the need to protect the environment for the benefit of future generations. This has led to the development of a number of international agreements and conventions, such as the United Nations Framework Convention on Climate Change (UNFCCC) and the Convention on Biological Diversity (CBD).

The UNFCCC is a treaty that aims to stabilize the concentrations of greenhouse gases in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system.

The CBD is a treaty that aims to conserve biological diversity and to ensure the sustainable use of its components.

Both of these treaties have been ratified by a large number of countries, and they have led to the development of a number of national policies and programs to address climate change and biodiversity conservation.

In addition to these international agreements, there are a number of other initiatives that are aimed at addressing climate change and biodiversity conservation. These include the Millennium Ecosystem Assessment (MA) and the Intergovernmental Panel on Climate Change (IPCC).

The MA is a report that was published in 2005 and it provides a comprehensive assessment of the state of the world's ecosystems and the services that they provide to humanity.

The IPCC is a scientific body that was established in 1988 and it provides the scientific basis for the UNFCCC. It has produced a number of reports on the state of the climate system and the impacts of climate change.

There is a growing body of evidence that suggests that climate change is a real and serious threat to the world's ecosystems and to the well-being of humanity. It is therefore essential that we take action to address this threat.

One of the most important ways in which we can address climate change is by reducing our greenhouse gas emissions. This can be done in a number of ways, such as by using renewable energy sources and by improving energy efficiency.

Another important way in which we can address climate change is by protecting and restoring the world's ecosystems. Ecosystems play a vital role in regulating the climate and in providing a number of other services that are essential for human well-being.

The CBD is a treaty that aims to conserve biological diversity and to ensure the sustainable use of its components.

Both of these treaties have been ratified by a large number of countries, and they have led to the development of a number of national policies and programs to address climate change and biodiversity conservation.

In addition to these international agreements, there are a number of other initiatives that are aimed at addressing climate change and biodiversity conservation. These include the Millennium Ecosystem Assessment (MA) and the World Bank's Global Environment Facility (GEF).

The MA is a major international assessment of the state of the world's ecosystems and the services they provide to humanity. It was completed in 2005 and its findings have been widely cited.

The GEF is a multilateral institution that provides financial assistance to developing countries for projects that address climate change and biodiversity conservation. It was established in 1991 and has since provided over \$10 billion in assistance.

There is a need for continued efforts to address climate change and biodiversity conservation. This includes the development of new policies and programs, as well as the implementation of existing ones.

It is also important to raise awareness of the issues and to encourage individuals and organizations to take action to reduce their impact on the environment.

Only through a combination of these efforts can we hope to protect the environment for the benefit of future generations.

The following table provides a summary of the key findings of the MA and the GEF.

The MA found that the world's ecosystems are being degraded at an alarming rate, and that this is leading to a loss of biodiversity and the services that ecosystems provide to humanity.

The GEF found that developing countries are particularly vulnerable to the impacts of climate change and biodiversity loss, and that they need financial assistance to address these issues.

Both of these findings highlight the need for continued efforts to address climate change and biodiversity conservation.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999) and the number of people in the private sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999).

There is a growing emphasis on the need to improve the quality of public services and to ensure that the public sector is efficient and effective. This has led to a number of initiatives, including the introduction of performance indicators and the establishment of public service bodies.

The public sector is also facing a number of challenges, including a growing demand for services, a need to improve the quality of services, and a need to ensure that the public sector is efficient and effective.
