the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own role to play. The public sector is also a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own role to play. The public sector is also a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the life expectancy of people in the world. As people live longer, they are more likely to have children. Another factor is the increase in the number of people who are in the reproductive age group (15-49 years of age). The number of people in this age group is projected to increase from 1.2 billion in 1990 to 2.5 billion in 2025 (United Nations 1999).

The increase in the number of children in the world is a major challenge for the world's governments. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money.

One of the most important factors that will determine whether the world's governments are able to meet the needs of the additional 1.3 billion children is the rate of economic growth. If the world's economies continue to grow at the current rate, the world's governments will be able to raise the money. However, if the world's economies slow down, the world's governments will not be able to raise the money.

The United Nations (1999) estimates that the world's economies will grow at an average rate of 3.5% per year from 1990 to 2025. This is a relatively low rate of growth, and it is not clear whether the world's governments will be able to raise the money. The United Nations (1999) also estimates that the world's economies will grow at an average rate of 2.5% per year from 2025 to 2050. This is an even lower rate of growth, and it is not clear whether the world's governments will be able to raise the money.

The United Nations (1999) also estimates that the world's economies will grow at an average rate of 1.5% per year from 2050 to 2100. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money. The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2100 to 2200. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money.

The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2200 to 2300. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money. The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2300 to 2400. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money.

The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2400 to 2500. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money. The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2500 to 2600. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money.

The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2600 to 2700. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money. The United Nations (1999) also estimates that the world's economies will grow at an average rate of 0.5% per year from 2700 to 2800. This is a very low rate of growth, and it is not clear whether the world's governments will be able to raise the money.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the life expectancy of people in the world. As people live longer, they are more likely to have children. Another factor is the increase in the number of people who are in the reproductive age group (15-49 years of age). The number of people in this age group is projected to increase from 1.2 billion in 1990 to 2.5 billion in 2025 (United Nations 1999).

The increase in the number of children in the world is a major challenge for the world's governments. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

One of the most important ways that the world's governments can meet this need is by investing in education. Education is a key factor in the development of a country, and it is essential for the well-being of its citizens. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

Another way that the world's governments can meet this need is by investing in health care. Health care is a key factor in the development of a country, and it is essential for the well-being of its citizens. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

There are a number of other factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the life expectancy of people in the world. As people live longer, they are more likely to have children. Another factor is the increase in the number of people who are in the reproductive age group (15-49 years of age). The number of people in this age group is projected to increase from 1.2 billion in 1990 to 2.5 billion in 2025 (United Nations 1999).

The increase in the number of children in the world is a major challenge for the world's governments. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

One of the most important ways that the world's governments can meet this need is by investing in education. Education is a key factor in the development of a country, and it is essential for the well-being of its citizens. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

Another way that the world's governments can meet this need is by investing in health care. Health care is a key factor in the development of a country, and it is essential for the well-being of its citizens. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 3.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and to ensure that they are able to live independently and actively in their own homes for as long as possible. This has led to a number of initiatives, including the development of age-friendly communities, and the establishment of local authority services to support older people. The aim of this paper is to review the current state of research on the needs of older people, and to discuss the implications for practice.

2. Background

The World Health Organization (WHO) defines ageing as a process, rather than a state. It is a process that involves changes in the body, mind, and social roles. The WHO also defines ageing as a process that is influenced by a number of factors, including genetics, environment, and lifestyle. The WHO also defines ageing as a process that is not inevitable, and that can be delayed or prevented.

The WHO also defines ageing as a process that is not inevitable, and that can be delayed or prevented. The WHO also defines ageing as a process that is not inevitable, and that can be delayed or prevented.

3. Methods

The data for this review were collected from a search of the literature. The search was conducted using the following keywords: 'ageing', 'older people', 'needs', 'research', 'review'. The search was conducted using the following databases: Medline, Psycinfo, and Sociofile.

The search was conducted using the following databases: Medline, Psycinfo, and Sociofile. The search was conducted using the following databases: Medline, Psycinfo, and Sociofile. The search was conducted using the following databases: Medline, Psycinfo, and Sociofile. The search was conducted using the following databases: Medline, Psycinfo, and Sociofile.

4. Results

The results of the search are presented in Table 1. The table shows the number of articles found for each keyword, and the number of articles that were included in the review. The table also shows the number of articles that were excluded from the review, and the reasons for exclusion.

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.1 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 3.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of older people, and to ensure that they are able to live independently and actively in their own homes for as long as possible. This has led to a number of initiatives, including the development of age-friendly communities, and the establishment of local authority services to support older people. The aim of this paper is to review the current state of research on the needs of older people, and to discuss the implications for practice.
