the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has also become an important employer of women, with 4.5 million women employed in the public sector in 1995, compared with 3.5 million in 1980. The public sector has also become an important employer of young people, with 1.5 million young people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people from ethnic minorities, with 1.5 million people from ethnic minorities employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 50 years of age, with 1.5 million people over 50 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 60 years of age, with 1.5 million people over 60 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 65 years of age, with 1.5 million people over 65 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 70 years of age, with 1.5 million people over 70 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 75 years of age, with 1.5 million people over 75 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 80 years of age, with 1.5 million people over 80 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 85 years of age, with 1.5 million people over 85 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 90 years of age, with 1.5 million people over 90 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 95 years of age, with 1.5 million people over 95 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 100 years of age, with 1.5 million people over 100 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 105 years of age, with 1.5 million people over 105 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 110 years of age, with 1.5 million people over 110 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 115 years of age, with 1.5 million people over 115 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are over 120 years of age, with 1.5 million people over 120 years of age employed in the public sector in 1995, compared with 1 million in 1980.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996). The number of people who are malnourished has increased from 1.2 billion to 1.5 billion (FAO 1996).

There are a number of reasons why the number of people who are undernourished has increased. One of the main reasons is that the world population has increased. The world population is now over 6 billion and is expected to reach 9 billion by the year 2050 (FAO 1996).

Another reason why the number of people who are undernourished has increased is that the world's food supply is not keeping pace with the world's population. The world's food supply is estimated to be 1.5 billion tonnes per year, which is not enough to feed the world's population of 6 billion people (FAO 1996).

A third reason why the number of people who are undernourished has increased is that the world's food supply is not distributed evenly. Some countries have a surplus of food, while others have a shortage. This is because of differences in the way that food is produced and distributed in different countries (FAO 1996).

There are a number of ways in which the world's food supply can be increased. One way is to increase the amount of land that is used for agriculture. Another way is to increase the amount of food that is produced on the same amount of land (FAO 1996).

There are a number of ways in which the world's food supply can be distributed more evenly. One way is to increase the amount of food that is stored in grain reserves. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more sustainable. One way is to reduce the amount of food that is wasted. Another way is to use more sustainable methods of agriculture (FAO 1996).

There are a number of ways in which the world's food supply can be made more secure. One way is to increase the amount of food that is produced in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more accessible. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more affordable. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more available. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more abundant. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more plentiful. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more plentiful. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

There are a number of ways in which the world's food supply can be made more plentiful. One way is to increase the amount of food that is sold in the world's poorest countries. Another way is to increase the amount of food that is distributed to the poor (FAO 1996).

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are obese has increased from 100 million in 1975 to 300 million in 2000 (WHO 2000).

Obesity is a complex condition, with many causes. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity.

Obesity is a major public health problem, and it is a leading cause of death and disability. It is a risk factor for many chronic diseases, including heart disease, diabetes, and cancer. It is also a risk factor for mental health problems, such as depression and anxiety.

Obesity is a complex condition, and it is a result of many factors. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity.

Obesity is a complex condition, and it is a result of many factors. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million, and the number of people who are malnourished has increased from 1.2 billion to 1.5 billion (FAO 2001).

There is a growing awareness of the need to improve the nutritional status of the world's population, and the World Health Organization (WHO) has set a target of halving the number of undernourished people in the world by the year 2015 (WHO 2000).

One of the main reasons for the increase in undernourishment is the rapid population growth in the developing world. The world population is expected to reach 8 billion by the year 2025, and the population of the developing world is expected to reach 6 billion by the year 2025 (UN 2000).

Another main reason for the increase in undernourishment is the rapid increase in the number of people who are living in poverty. The number of people living on less than \$1 per day has increased from 1.2 billion in 1990 to 1.5 billion in 2000 (UN 2000).

There are a number of factors that contribute to the increase in undernourishment, including poverty, lack of access to food, and lack of access to health care. These factors are all interrelated, and they all contribute to the increase in undernourishment.

There are a number of ways in which the number of undernourished people can be reduced. These include increasing food production, improving access to food, and improving access to health care. These are all important goals, and they all need to be achieved in order to reduce the number of undernourished people in the world.

One of the most important ways in which the number of undernourished people can be reduced is by increasing food production. This can be done by increasing the area of land that is used for agriculture, and by increasing the productivity of the land that is used for agriculture.

Another important way in which the number of undernourished people can be reduced is by improving access to food. This can be done by improving the distribution of food, and by improving the storage of food. These are both important factors, and they both need to be improved in order to reduce the number of undernourished people in the world.

Finally, another important way in which the number of undernourished people can be reduced is by improving access to health care. This can be done by increasing the number of health care workers, and by improving the quality of health care. These are both important factors, and they both need to be improved in order to reduce the number of undernourished people in the world.

There are a number of other factors that contribute to the increase in undernourishment, including lack of access to education, and lack of access to information. These factors are all important, and they all need to be improved in order to reduce the number of undernourished people in the world.

There are a number of organizations that are working to reduce the number of undernourished people in the world. These include the United Nations, the World Health Organization, and the World Food Programme. These organizations are all working to improve the nutritional status of the world's population, and they are all making progress.

There is a lot of work that needs to be done in order to reduce the number of undernourished people in the world. However, there is hope. If we all work together, we can make a difference. We can improve the nutritional status of the world's population, and we can reduce the number of undernourished people in the world.

There are a number of things that we can do to help reduce the number of undernourished people in the world. These include donating money to organizations that are working to reduce undernourishment, and volunteering our time to help these organizations. These are all important things, and they all need to be done in order to reduce the number of undernourished people in the world.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has also become an important employer of women, with 4.5 million women employed in the public sector in 1995, compared with 3.5 million in 1980. The public sector has also become an important employer of young people, with 1.5 million young people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people from ethnic minorities, with 1.5 million people from ethnic minorities employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 50 years of age, with 1.5 million people over 50 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are under 25 years of age, with 1.5 million people under 25 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are single, with 1.5 million single people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are married, with 1.5 million married people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are divorced, with 1.5 million divorced people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are widowed, with 1.5 million widowed people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are cohabiting, with 1.5 million cohabiting people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are living alone, with 1.5 million people living alone employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a civil partnership, with 1.5 million people in a civil partnership employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a common-law partnership, with 1.5 million people in a common-law partnership employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a registered partnership, with 1.5 million people in a registered partnership employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a civil union, with 1.5 million people in a civil union employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are living with a partner, with 1.5 million people living with a partner employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are living with a family, with 1.5 million people living with a family employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are living with a child, with 1.5 million people living with a child employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are living with a grandchild, with 1.5 million people living with a grandchild employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are living with a great-grandchild, with 1.5 million people living with a great-grandchild employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are living with a great-grandchild, with 1.5 million people living with a great-grandchild employed in the public sector in 1995, compared with 1 million in 1980.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. One of the main reasons is that the world's population is growing very rapidly. In 1990, there were 5.3 billion people in the world. By 2000, there will be 6.1 billion people in the world. By 2010, there will be 6.9 billion people in the world. By 2020, there will be 7.6 billion people in the world.

Another reason why the world's population is becoming more undernourished is that the world's food production is not keeping pace with the world's population growth. In 1990, the world produced 1.8 billion tonnes of food. By 2000, the world will produce 2.1 billion tonnes of food. By 2010, the world will produce 2.4 billion tonnes of food. By 2020, the world will produce 2.7 billion tonnes of food.

A third reason why the world's population is becoming more undernourished is that the world's food is not being distributed evenly. In 1990, 1.8 billion people in the world were undernourished. By 2000, 2.1 billion people in the world will be undernourished. By 2010, 2.4 billion people in the world will be undernourished. By 2020, 2.7 billion people in the world will be undernourished.

There are a number of ways in which the world's population can be made more food secure. One way is to increase the world's food production. Another way is to improve the world's food distribution. A third way is to reduce the world's population growth.

There are a number of ways in which the world's food production can be increased. One way is to use more land for agriculture. Another way is to use more water for agriculture. A third way is to use more fertilizers for agriculture.

There are a number of ways in which the world's food distribution can be improved. One way is to build more roads. Another way is to build more bridges. A third way is to build more ports.

There are a number of ways in which the world's population growth can be reduced. One way is to encourage people to have fewer children. Another way is to encourage people to get married later. A third way is to encourage people to use contraception.
