the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of people in the world who are 65 years of age and over has increased by 100 million in the same period. The number of people in the world who are 65 years of age and over is projected to increase to 1.2 billion by the year 2050 (United Nations 1999).

There is a growing awareness of the need to address the needs of the elderly population. The World Health Organization (WHO) has identified the elderly population as a priority for research and action. The WHO has established the World Health Survey, which is a large-scale, longitudinal study of the health and well-being of the elderly population. The WHO has also established the World Health Day, which is celebrated every year on April 7th.

The WHO has also established the World Health Organization's (WHO) Global Strategy on the Elderly. The WHO's Global Strategy on the Elderly is a framework for action that aims to improve the health and well-being of the elderly population. The WHO's Global Strategy on the Elderly is based on the following principles:

- The elderly population should be treated as a resource, not a burden.
- The elderly population should be empowered to take control of their own lives.
- The elderly population should be supported to live in their own homes and communities.
- The elderly population should be protected from abuse and neglect.

The WHO's Global Strategy on the Elderly is a framework for action that aims to improve the health and well-being of the elderly population. The WHO's Global Strategy on the Elderly is based on the following principles:

- The elderly population should be treated as a resource, not a burden.
- The elderly population should be empowered to take control of their own lives.
- The elderly population should be supported to live in their own homes and communities.
- The elderly population should be protected from abuse and neglect.

- The elderly population should be protected from abuse and neglect.

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of education, where cultural differences can significantly impact learning outcomes. The paper then moves on to discuss the challenges of conducting research in diverse cultural settings. It notes that researchers often face difficulties in establishing rapport with participants and in interpreting their responses. To address these challenges, the paper suggests several strategies, including the use of local researchers and the development of culturally appropriate research instruments. The final part of the paper discusses the importance of ethical considerations in cross-cultural research. It emphasizes the need for researchers to obtain informed consent from participants and to ensure that the research is conducted in a way that respects the dignity and rights of all individuals.
