the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly. The world population is projected to increase from 5.5 billion in 1990 to 7.5 billion in 2020 (UNEP 1994). This increase in population will place a greater demand on the world's food resources.

Second, the world's food resources are being depleted. The world's forests are being cleared at a rate of 100,000 km² per year (FAO 1996). This loss of forest land is reducing the world's capacity to produce food. The world's fisheries are also being depleted. The world's fish stocks are being overfished, and this is reducing the world's capacity to produce food.

Third, the world's food resources are being distributed unevenly. The world's food resources are concentrated in a few countries, and this is leading to a growing gap between the rich and the poor. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Fourth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Fifth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Sixth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Seventh, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Eighth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Ninth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Tenth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Eleventh, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

Twelfth, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources. The world's food resources are also being used in a way that is not sustainable. The world's food resources are being used in a way that is depleting the soil and the water resources.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex and diverse entity, and it is difficult to define it precisely. However, it can be described as the part of the economy that is owned and controlled by the state. It includes a wide range of activities, from the provision of social services to the operation of public utilities. The public sector is a major source of employment in the UK, and it plays a significant role in the economy.

The public sector is a complex and diverse entity, and it is difficult to define it precisely. However, it can be described as the part of the economy that is owned and controlled by the state. It includes a wide range of activities, from the provision of social services to the operation of public utilities. The public sector is a major source of employment in the UK, and it plays a significant role in the economy.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has also become an important employer of women, with 4.5 million women employed in the public sector in 1995, compared with 3.5 million in 1980. The public sector has also become an important employer of young people, with 1.5 million young people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people from ethnic minorities, with 1.5 million people from ethnic minorities employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 50 years of age, with 1.5 million people over 50 years of age employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are under 25 years of age, with 1.5 million people under 25 years of age employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are single, with 1.5 million single people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are married, with 1.5 million married people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are divorced, with 1.5 million divorced people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are widowed, with 1.5 million widowed people employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are cohabiting, with 1.5 million cohabiting people employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are living alone, with 1.5 million people living alone employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a civil partnership, with 1.5 million people in a civil partnership employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a common-law partnership, with 1.5 million people in a common-law partnership employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a registered partnership, with 1.5 million people in a registered partnership employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a civil partnership, with 1.5 million people in a civil partnership employed in the public sector in 1995, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a common-law partnership, with 1.5 million people in a common-law partnership employed in the public sector in 1995, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a registered partnership, with 1.5 million people in a registered partnership employed in the public sector in 1995, compared with 1 million in 1980.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations 1999). The United Nations predicts that by the year 2025, the number of people under 15 years of age will be 1.8 billion, and the number of people aged 65 and over will be 1.1 billion.

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 72 years for men and 77 years for women. By 2025, it is predicted that the life expectancy at birth will be 75 years for men and 80 years for women (United Nations 1999). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a more active lifestyle.

Another factor that is likely to contribute to the increase in the number of people aged 65 and over is the decrease in fertility rates. In 1990, the fertility rate was 2.8 children per woman. By 2025, it is predicted that the fertility rate will be 1.5 children per woman (United Nations 1999). This decrease in fertility rate is due to a number of factors, including a decrease in the number of children that women want to have, and a decrease in the number of children that women are able to have.

The increase in the number of people aged 65 and over is a global phenomenon. In 1990, there were 0.2 billion people aged 65 and over in the world. By 2025, it is predicted that there will be 1.1 billion people aged 65 and over in the world (United Nations 1999). This increase in the number of people aged 65 and over is a significant challenge for many countries, particularly in the developed world.

One of the main challenges of an ageing population is the increase in the number of people who are dependent on others for care. In 1990, there were 0.2 billion people aged 65 and over in the world. By 2025, it is predicted that there will be 1.1 billion people aged 65 and over in the world (United Nations 1999). This increase in the number of people aged 65 and over is a significant challenge for many countries, particularly in the developed world.

One of the main challenges of an ageing population is the increase in the number of people who are dependent on others for care. In 1990, there were 0.2 billion people aged 65 and over in the world. By 2025, it is predicted that there will be 1.1 billion people aged 65 and over in the world (United Nations 1999). This increase in the number of people aged 65 and over is a significant challenge for many countries, particularly in the developed world.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations, 1999). The United Nations predicts that by the year 2025, the number of people aged 65 and over will have increased to 1.1 billion, and the number of people under 15 years of age will have decreased to 1.4 billion.

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 72 years for men and 77 years for women. By 2025, it is predicted that the life expectancy at birth will be 77 years for men and 82 years for women (United Nations, 1999). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a more active lifestyle.

Another factor that is likely to contribute to the increase in the number of people aged 65 and over is the decrease in the number of people in the working age population. In 1990, the number of people aged 15 and over was 2.7 billion. By 2025, it is predicted that the number of people aged 15 and over will be 2.4 billion (United Nations, 1999). This decrease is due to a number of factors, including a decrease in the birth rate and a decrease in the number of people who are employed.

The increase in the number of people aged 65 and over has a number of implications for society. One of the main implications is the need for more social security and health care services. As the number of people aged 65 and over increases, the number of people who are dependent on social security and health care services will also increase. This will place a greater burden on governments and society as a whole.

Another implication is the need for more housing and care services for the elderly. As the number of people aged 65 and over increases, the number of people who need housing and care services will also increase. This will place a greater burden on governments and society as a whole.

The increase in the number of people aged 65 and over is a major challenge for society. It is important that we take steps to address this challenge in order to ensure that we can provide the care and support that the elderly need. This will require a combination of government action, private sector action, and action by individuals and communities.

One of the ways in which we can address this challenge is by increasing the number of people who are employed. This will help to reduce the number of people who are dependent on social security and health care services. It will also help to increase the number of people who are able to support themselves and their families.

Another way in which we can address this challenge is by improving the quality of life for the elderly. This can be done by providing better housing, better care services, and better social services. It can also be done by encouraging the elderly to be more active and engaged in their communities.

The increase in the number of people aged 65 and over is a major challenge for society. It is important that we take steps to address this challenge in order to ensure that we can provide the care and support that the elderly need. This will require a combination of government action, private sector action, and action by individuals and communities.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are obese has increased from 100 million in 1975 to 300 million in 2000 (WHO 2000).

Obesity is a complex condition, and the aetiology is multifactorial. The genetic, environmental and behavioural factors that influence the development of obesity are discussed below.
