the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion (United Nations 1994).

There is a growing awareness of the need to address the needs of children in the 1990s. The United Nations Children's Fund (UNICEF) has been instrumental in this regard, and has produced a number of reports and publications which have helped to focus attention on the needs of children in the 1990s. One of the most recent reports is the *State of the World's Children 1994* (UNICEF 1994).

The report highlights the need for a new approach to the development of children in the 1990s. It argues that the traditional approach of focusing on the physical and intellectual development of children is inadequate. It calls for a more holistic approach, which takes account of the child's emotional, social and cultural development as well as their physical and intellectual development.

The report also highlights the need for a new approach to the measurement of child development. It argues that the traditional approach of using standardized tests is inadequate. It calls for a more holistic approach, which takes account of the child's overall development, including their emotional, social and cultural development as well as their physical and intellectual development.

The report also highlights the need for a new approach to the provision of services for children in the 1990s. It argues that the traditional approach of providing services through the health and education systems is inadequate. It calls for a more holistic approach, which takes account of the child's overall development, including their emotional, social and cultural development as well as their physical and intellectual development.

The report also highlights the need for a new approach to the involvement of children in the 1990s. It argues that the traditional approach of involving children in decision-making through the use of focus groups and surveys is inadequate. It calls for a more holistic approach, which takes account of the child's overall development, including their emotional, social and cultural development as well as their physical and intellectual development.

The report also highlights the need for a new approach to the measurement of child development. It argues that the traditional approach of using standardized tests is inadequate. It calls for a more holistic approach, which takes account of the child's overall development, including their emotional, social and cultural development as well as their physical and intellectual development.

The report also highlights the need for a new approach to the involvement of children in the 1990s. It argues that the traditional approach of involving children in decision-making through the use of focus groups and surveys is inadequate. It calls for a more holistic approach, which takes account of the child's overall development, including their emotional, social and cultural development as well as their physical and intellectual development.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.4 billion to 0.6 billion (United Nations, 2002). The United Nations predicts that by 2050, the number of people aged 65 and over will have increased to 1.1 billion, and the number of people under 15 years of age will have decreased to 1.1 billion (United Nations, 2002).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 47 years for men and 51 years for women. By 2050, the life expectancy at birth is predicted to be 74 years for men and 79 years for women (United Nations, 2002).

Another factor is the decrease in fertility. In 1990, the total fertility rate was 4.7 children per woman. By 2050, the total fertility rate is predicted to be 1.5 children per woman (United Nations, 2002). This decrease in fertility is due to a number of factors, including the increase in the age at which women have children, the increase in the use of contraception, and the increase in the number of women who are in the workforce.

The increase in the number of people aged 65 and over is likely to have a number of implications for society. One of the main implications is the increase in the demand for social services. As the number of people aged 65 and over increases, the demand for social services such as housing, healthcare, and social care is likely to increase. This is because older people are more likely to need these services than younger people.

Another implication is the increase in the demand for financial services. As the number of people aged 65 and over increases, the demand for financial services such as pensions, insurance, and investment services is likely to increase. This is because older people are more likely to need these services than younger people.

The increase in the number of people aged 65 and over is also likely to have implications for the economy. One of the main implications is the increase in the demand for goods and services. As the number of people aged 65 and over increases, the demand for goods and services such as food, clothing, and housing is likely to increase. This is because older people are more likely to need these goods and services than younger people.

Another implication is the increase in the demand for labour. As the number of people aged 65 and over increases, the demand for labour is likely to increase. This is because older people are more likely to be in the workforce than younger people. This is due to a number of factors, including the increase in life expectancy, the decrease in fertility, and the increase in the number of people who are in the workforce.

The increase in the number of people aged 65 and over is also likely to have implications for the environment. One of the main implications is the increase in the demand for resources. As the number of people aged 65 and over increases, the demand for resources such as water, energy, and land is likely to increase. This is because older people are more likely to need these resources than younger people.

Another implication is the increase in the demand for services. As the number of people aged 65 and over increases, the demand for services such as healthcare, social care, and housing is likely to increase. This is because older people are more likely to need these services than younger people. This is due to a number of factors, including the increase in life expectancy, the decrease in fertility, and the increase in the number of people who are in the workforce.
