the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations, 2002). The United Nations predicts that by 2050, the number of people aged 65 and over will have increased to 1.2 billion, and the number of people under 15 years of age will have decreased to 1.1 billion (United Nations, 2002).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 72 years for men and 77 years for women. By 2050, the life expectancy at birth is predicted to be 78 years for men and 83 years for women (United Nations, 2002). This increase in life expectancy is due to a number of factors, including improvements in medical care, better nutrition, and a more active lifestyle.

Another factor that is likely to contribute to the increase in the number of people aged 65 and over is the decrease in fertility. In 1990, the total fertility rate was 2.8 children per woman. By 2050, the total fertility rate is predicted to be 1.2 children per woman (United Nations, 2002). This decrease in fertility is due to a number of factors, including the use of contraception, the desire for smaller families, and the increasing age at which women have children.

The increase in the number of people aged 65 and over is a global phenomenon. In 1990, there were 0.2 billion people aged 65 and over in the world. By 2050, there are predicted to be 1.2 billion people aged 65 and over in the world (United Nations, 2002). This increase is particularly pronounced in developed countries, where the proportion of the population aged 65 and over is already high.

The increase in the number of people aged 65 and over has a number of implications for society. One of the main implications is the need for more social security and healthcare services. As the number of people aged 65 and over increases, the number of people who are dependent on social security and healthcare services will also increase. This will place a greater burden on governments and society as a whole.

Another implication of the increase in the number of people aged 65 and over is the need for more housing and care services. As the number of people aged 65 and over increases, the number of people who need housing and care services will also increase. This will place a greater burden on governments and society as a whole.

The increase in the number of people aged 65 and over is a challenge for society. However, it is also an opportunity. As the number of people aged 65 and over increases, the number of people who are experienced and skilled will also increase. This will be a valuable asset for society as a whole.

In conclusion, the number of people aged 65 and over is predicted to increase significantly in the 21st century. This increase is due to a number of factors, including improvements in life expectancy and a decrease in fertility. The increase in the number of people aged 65 and over has a number of implications for society, including the need for more social security and healthcare services, and the need for more housing and care services. However, the increase in the number of people aged 65 and over is also an opportunity, as it will increase the number of experienced and skilled people in society.
