the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996). The number of people who are malnourished has increased from 1.2 billion to 1.5 billion (FAO 1996).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a goal of reducing the number of undernourished people in the world by 50% by the year 2015 (WHO 1996).

One of the main causes of malnutrition is poverty. People who are poor are often unable to afford the food and other resources that they need to live a healthy life. They may also live in areas where the soil is poor and the climate is harsh, which makes it difficult to grow food.

Another cause of malnutrition is lack of access to health care. People who are poor may not be able to afford the medical services that they need to stay healthy. They may also live in areas where there is a lack of clean water and sanitation, which can lead to disease.

There are many ways to improve the nutritional status of the world's population. One way is to increase the production of food. This can be done by using better farming techniques and by increasing the area of land that is used for farming.

Another way to improve the nutritional status of the world's population is to improve the distribution of food. This can be done by building roads and bridges that connect rural areas to cities, and by improving the infrastructure of the food supply chain.

There are also many ways to improve the nutritional status of the world's population through education and health care. This can be done by teaching people about the importance of a healthy diet and by providing them with the resources that they need to live a healthy life.

It is important to remember that malnutrition is a complex problem that cannot be solved by a single solution. It is a problem that requires a multi-faceted approach that takes into account the many different causes of malnutrition.

By working together, we can improve the nutritional status of the world's population and ensure that everyone has the resources that they need to live a healthy life.
