the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of children under 15 years of age in the world is projected to increase to 3.1 billion by 2015, with the largest increases occurring in the developing countries (United Nations, 1999).

There is a growing awareness of the need to address the needs of children in the world, and the United Nations has established the United Nations Convention on the Rights of the Child (UNCRC) in 1989. The UNCRC is a legally binding treaty that sets out the rights of children and the obligations of governments to protect and promote these rights. The UNCRC has been ratified by 112 countries, and it is the most widely ratified human rights treaty in the world.

The UNCRC is a comprehensive document that covers a wide range of issues, including the right to life, the right to education, the right to health, and the right to participate in decisions that affect their lives. The UNCRC also sets out the obligations of governments to protect children from abuse and exploitation, and to provide them with a safe and secure environment.

The UNCRC is a landmark document that has helped to raise awareness of the rights of children and to promote their well-being. It is a testament to the commitment of the international community to protect and promote the rights of children, and it is a source of inspiration for all who work for the betterment of the world.

Abstract The purpose of this study was to investigate the relationship between the child's perception of the parent's mental health and the child's emotional and behavioral problems. The study was conducted with 100 children aged 8–12 years and their parents.

Method The children completed a questionnaire about their perception of their parent's mental health, and the parents completed a questionnaire about their mental health. The children also completed a questionnaire about their emotional and behavioral problems.

Results The results of the study showed that there was a significant positive relationship between the child's perception of the parent's mental health and the child's emotional and behavioral problems.

Conclusions The study suggests that the child's perception of the parent's mental health is an important factor in the development of the child's emotional and behavioral problems.

Keywords Child, parent, mental health, emotional and behavioral problems.

Introduction The purpose of this study was to investigate the relationship between the child's perception of the parent's mental health and the child's emotional and behavioral problems.

The study was conducted with 100 children aged 8–12 years and their parents. The children completed a questionnaire about their perception of their parent's mental health, and the parents completed a questionnaire about their mental health.

The children also completed a questionnaire about their emotional and behavioral problems. The results of the study showed that there was a significant positive relationship between the child's perception of the parent's mental health and the child's emotional and behavioral problems.

The study suggests that the child's perception of the parent's mental health is an important factor in the development of the child's emotional and behavioral problems.
