the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996). The number of people who are malnourished has increased from 1.2 billion to 1.5 billion (FAO 1996).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a goal of reducing the number of undernourished people in the world by 50% by the year 2015 (WHO 1996).

One of the main causes of malnutrition is the lack of access to adequate food. This is often due to poverty, which prevents people from being able to afford the food they need. Another cause is the lack of access to land, which prevents people from being able to grow their own food.

There are a number of ways in which the nutritional status of the world's population can be improved. One way is to increase the production of food. This can be done by increasing the area of land that is used for agriculture, by increasing the productivity of the land, and by increasing the number of people who are involved in agriculture.

Another way to improve the nutritional status of the world's population is to increase the distribution of food. This can be done by increasing the number of people who are involved in the distribution of food, and by increasing the efficiency of the distribution system.

There are a number of other ways in which the nutritional status of the world's population can be improved. These include increasing the access to food, increasing the quality of food, and increasing the awareness of the need for good nutrition.

It is important to note that improving the nutritional status of the world's population is not just a matter of increasing the production of food. It is also a matter of increasing the access to food, increasing the quality of food, and increasing the awareness of the need for good nutrition.

There are a number of ways in which the nutritional status of the world's population can be improved. the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly. The world population is projected to reach 6 billion by the year 2000, and to reach 8 billion by the year 2025 (UNEP 1992).

Second, the world's population is becoming more urban. In 1990, 54% of the world's population lived in urban areas. By the year 2000, this figure is projected to rise to 60% (UNEP 1992).

Third, the world's population is becoming more dependent on food imports. In 1990, the world's population imported 100 million tonnes of food. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Fourth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Fifth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Sixth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Seventh, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Eighth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Ninth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Tenth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Eleventh, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Twelfth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Thirteenth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Fourteenth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).

Fifteenth, the world's population is becoming more dependent on food aid. In 1990, the world's population received 100 million tonnes of food aid. By the year 2000, this figure is projected to rise to 150 million tonnes (UNEP 1992).
