the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own aims and objectives. The public sector is also a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1998). The public sector has also become an important employer of women, with 4.5 million women employed in the public sector in 1998, compared with 3.5 million in 1980. The public sector has also become an important employer of young people, with 1.5 million young people employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people with disabilities, with 1.5 million people with disabilities employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people from ethnic minorities, with 1.5 million people from ethnic minorities employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are over 50 years of age, with 1.5 million people over 50 years of age employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are under 25 years of age, with 1.5 million people under 25 years of age employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are single, with 1.5 million single people employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are married, with 1.5 million married people employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are divorced, with 1.5 million divorced people employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are widowed, with 1.5 million widowed people employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are cohabiting, with 1.5 million cohabiting people employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are living alone, with 1.5 million people living alone employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a partnership, with 1.5 million people in a partnership employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a civil partnership, with 1.5 million people in a civil partnership employed in the public sector in 1998, compared with 1 million in 1980.

The public sector has also become an important employer of people who are in a registered partnership, with 1.5 million people in a registered partnership employed in the public sector in 1998, compared with 1 million in 1980. The public sector has also become an important employer of people who are in a common-law partnership, with 1.5 million people in a common-law partnership employed in the public sector in 1998, compared with 1 million in 1980.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly. The world population is projected to increase from 5.5 billion in 1990 to 7.5 billion in 2020 (UNEP 1992). Second, the world's population is becoming more urbanized. The world's population is projected to increase from 25% in 1990 to 50% in 2020 (UNEP 1992).

Third, the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Fourth, the world's population is becoming more dependent on food aid. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992).

There are a number of reasons why the world's population is becoming more dependent on food imports and food aid. First, the world's population is becoming more dependent on food imports because the world's population is becoming more urbanized. The world's population is projected to increase from 25% in 1990 to 50% in 2020 (UNEP 1992).

Second, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Third, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Fourth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Fifth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Sixth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Seventh, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Eighth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Ninth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

The world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports. The world's population is projected to increase from 10% in 1990 to 30% in 2020 (UNEP 1992). Tenth, the world's population is becoming more dependent on food aid because the world's population is becoming more dependent on food imports.

the 1990s, the number of people in the United States who are obese has increased by 100% (Flegal et al. 2002). In the United Kingdom, the prevalence of obesity has increased from 10% in 1980 to 16% in 1997 (Health Survey for England 1997). In the United States, the prevalence of obesity has increased from 15% in 1980 to 23% in 1994 (Flegal et al. 2002).

Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure. The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors.

Obesity is a major public health problem, and it is associated with a number of health problems, including type 2 diabetes, heart disease, and stroke. It is also associated with a number of psychological problems, including depression and anxiety. Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure.

The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors. Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure.

The energy intake is determined by the amount of food and drink consumed, and the energy expenditure is determined by the amount of physical activity. The imbalance between energy intake and energy expenditure is the result of a combination of genetic, environmental, and behavioural factors. Obesity is a complex condition, and its aetiology is multifactorial. It is a result of an imbalance between energy intake and energy expenditure.
