the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the life expectancy of people in the world. As people live longer, they are more likely to have children. Another factor is the increase in the number of people who are in the reproductive age group (15-49 years of age). The number of people in this age group is projected to increase from 1.2 billion in 1990 to 2.5 billion in 2025 (United Nations 1999).

The increase in the number of children in the world is a major challenge for the world's governments. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

One of the most important ways that the world's governments can meet this need is by increasing the number of people who are in the reproductive age group. This can be done by increasing the number of people who are educated and employed. The United Nations (1999) estimates that the world's governments will need to spend an additional \$1.5 trillion by the year 2025 to provide for the needs of the additional 1.3 billion children. This is a huge sum of money, and it is not clear how the world's governments will be able to raise the money to meet this need.

the 1990s, the number of people in the UK with a mental health problem has increased by 50% (Mental Health Foundation 2000). The prevalence of mental health problems in the UK is estimated to be 16% (Mental Health Foundation 2000).

There is a growing awareness of the need to address the needs of people with mental health problems. The UK government has set out a strategy for mental health care (Department of Health 1999). The strategy aims to improve the lives of people with mental health problems by providing them with the best possible care and support. The strategy also aims to reduce the stigma and discrimination that people with mental health problems often experience.

One of the key challenges in mental health care is how to provide care and support that is tailored to the needs of individual people. This is because mental health problems can affect people in different ways, and the needs of people with mental health problems can change over time. Therefore, it is important to have a system of care and support that is flexible and responsive to the needs of individual people.

One way to address this challenge is to use a system of care and support that is based on the principles of recovery. Recovery is a process of moving from a state of mental health problems to a state of well-being. Recovery is not a linear process, and it can take time. However, recovery is possible for many people with mental health problems.

Recovery-oriented care and support focuses on the strengths and abilities of people with mental health problems, rather than on their weaknesses. It also focuses on helping people to develop a sense of purpose and meaning in their lives. Recovery-oriented care and support is based on the following principles:

- People with mental health problems are experts on their own experiences.
- People with mental health problems have the right to be involved in decisions about their care and support.
- People with mental health problems have the right to live a life of choice.
- People with mental health problems have the right to be treated with respect and dignity.

Recovery-oriented care and support is a new way of thinking about mental health care. It is a way of thinking that puts people with mental health problems at the centre of the system. It is a way of thinking that believes that recovery is possible for many people with mental health problems.

Recovery-oriented care and support is a way of thinking that is based on the following principles:

- People with mental health problems are experts on their own experiences.
- People with mental health problems have the right to be involved in decisions about their care and support.
- People with mental health problems have the right to live a life of choice.
- People with mental health problems have the right to be treated with respect and dignity.

Recovery-oriented care and support is a way of thinking that is based on the following principles:

- People with mental health problems are experts on their own experiences.
- People with mental health problems have the right to be involved in decisions about their care and support.
- People with mental health problems have the right to live a life of choice.
- People with mental health problems have the right to be treated with respect and dignity.
