the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the efficiency of the public sector, and to ensure that the public sector is able to deliver the services that are required by the public in a cost-effective manner.

The public sector is a large and complex organisation, and it is difficult to ensure that it is able to deliver the services that are required by the public in a cost-effective manner. There are a number of factors that can contribute to this problem, including:

- A lack of clear objectives and priorities.
- A lack of communication and coordination between different parts of the organisation.
- A lack of resources, including staff and money.
- A lack of information and data.

These factors can all contribute to a situation where the public sector is unable to deliver the services that are required by the public in a cost-effective manner. It is therefore essential that the public sector is able to address these issues in order to improve its efficiency and effectiveness.

One of the ways in which the public sector can improve its efficiency and effectiveness is by using information technology. Information technology can be used in a number of ways, including:

- To improve communication and coordination between different parts of the organisation.
- To improve the collection and analysis of data.
- To improve the delivery of services to the public.

Information technology can also be used to improve the efficiency of the public sector by reducing the costs of delivering services. For example, information technology can be used to reduce the costs of staff and of the delivery of services.

Information technology can also be used to improve the quality of services delivered by the public sector. For example, information technology can be used to improve the accuracy of data and to improve the speed of service delivery.

Information technology can also be used to improve the transparency of the public sector. For example, information technology can be used to make information about the public sector more accessible to the public.

Information technology can also be used to improve the accountability of the public sector. For example, information technology can be used to make it easier for the public to hold the public sector accountable for its actions.

Information technology can also be used to improve the efficiency of the public sector by reducing the costs of delivering services. For example, information technology can be used to reduce the costs of staff and of the delivery of services.

Information technology can also be used to improve the quality of services delivered by the public sector. For example, information technology can be used to improve the accuracy of data and to improve the speed of service delivery.

Information technology can also be used to improve the transparency of the public sector. For example, information technology can be used to make information about the public sector more accessible to the public.

Information technology can also be used to improve the accountability of the public sector. For example, information technology can be used to make it easier for the public to hold the public sector accountable for its actions.

Information technology can also be used to improve the efficiency of the public sector by reducing the costs of delivering services. For example, information technology can be used to reduce the costs of staff and of the delivery of services.

Information technology can also be used to improve the quality of services delivered by the public sector. For example, information technology can be used to improve the accuracy of data and to improve the speed of service delivery.

Information technology can also be used to improve the transparency of the public sector. For example, information technology can be used to make information about the public sector more accessible to the public.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the efficiency of the public sector, and to ensure that the public sector is able to deliver the services that are required by the public in a cost-effective manner.

The public sector is a large and complex organisation, and it is difficult to ensure that it is able to deliver the services that are required by the public in a cost-effective manner. There are a number of factors that can contribute to this problem, including:

- A lack of clear objectives and priorities.
- A lack of communication and coordination between different parts of the organisation.
- A lack of resources, including staff and money.
- A lack of information and data.

These factors can all contribute to a situation where the public sector is unable to deliver the services that are required by the public in a cost-effective manner. It is therefore essential that the public sector is able to address these issues in order to improve its efficiency and effectiveness.

One of the ways in which the public sector can improve its efficiency and effectiveness is by using information technology. Information technology can be used in a number of ways, including:

- To improve communication and coordination between different parts of the organisation.
- To improve the collection and analysis of data.
- To improve the delivery of services to the public.

Information technology can also be used to improve the efficiency of the public sector by reducing the costs of delivering services. For example, information technology can be used to reduce the costs of staff and of the delivery of services.

Information technology can also be used to improve the quality of services delivered by the public sector. For example, information technology can be used to improve the accuracy of data and to improve the speed of service delivery.

Information technology can also be used to improve the transparency of the public sector. For example, information technology can be used to make information about the public sector more accessible to the public.

Information technology can also be used to improve the accountability of the public sector. For example, information technology can be used to make it easier for the public to hold the public sector accountable for its actions.

Information technology can also be used to improve the efficiency of the public sector by reducing the costs of delivering services. For example, information technology can be used to reduce the costs of staff and of the delivery of services.

Information technology can also be used to improve the quality of services delivered by the public sector. For example, information technology can be used to improve the accuracy of data and to improve the speed of service delivery.

Information technology can also be used to improve the transparency of the public sector. For example, information technology can be used to make information about the public sector more accessible to the public.

Information technology can also be used to improve the accountability of the public sector. For example, information technology can be used to make it easier for the public to hold the public sector accountable for its actions.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex organisation, and it is difficult to understand how it works. The public sector is made up of many different organisations, each of which has its own aims and objectives. The public sector is also funded by the government, and this has implications for the way in which it is managed and the way in which it is funded.
