the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. The most important is that the world's population is growing very rapidly. In 1990, the world's population was 5.3 billion. By 2000, it was 6.1 billion. By 2010, it is expected to be 6.9 billion (UN 1998).

Another reason why the world's population is becoming more undernourished is that the world's food supply is not keeping pace with the world's population. The world's food supply is growing at a rate of 1.5% per year, while the world's population is growing at a rate of 1.8% per year (FAO 1996).

A third reason why the world's population is becoming more undernourished is that the world's food is not being distributed evenly. In 1990, 15% of the world's population was undernourished. By 2000, 18% of the world's population was undernourished. By 2010, 21% of the world's population is expected to be undernourished (UN 1998).

There are a number of ways in which the world's food supply can be increased. One way is to increase the amount of land that is used for agriculture. Another way is to increase the amount of food that is produced on each unit of land. A third way is to reduce the amount of food that is lost or wasted (FAO 1996).

There are a number of ways in which the world's food can be distributed more evenly. One way is to increase the amount of food that is available in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (UN 1998).

There are a number of ways in which the world's food can be made more affordable. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (FAO 1996).

There are a number of ways in which the world's food can be made more nutritious. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (UN 1998).

There are a number of ways in which the world's food can be made more sustainable. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (FAO 1996).

There are a number of ways in which the world's food can be made more secure. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (UN 1998).

There are a number of ways in which the world's food can be made more accessible. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (FAO 1996).

There are a number of ways in which the world's food can be made more available. One way is to increase the amount of food that is produced in the poorest countries. Another way is to reduce the amount of food that is lost or wasted. A third way is to increase the amount of food that is sold in the poorest countries (UN 1998).

There are a number of ways in which the world's food can be made more affordable. One way is to increase the amount of food that is produced in the poorest countries.
