the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.4 billion to 0.6 billion (United Nations, 2002). The United Nations predicts that by 2050, the number of people aged 65 and over will have increased to 1.1 billion, and the number of people under 15 years of age will have decreased to 1.1 billion (United Nations, 2002).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 47 years for men and 51 years for women. By 2050, the life expectancy at birth is predicted to be 74 years for men and 79 years for women (United Nations, 2002).

Another factor is the decrease in fertility. In 1990, the total fertility rate was 4.7 children per woman. By 2050, the total fertility rate is predicted to be 1.5 children per woman (United Nations, 2002). This decrease in fertility is due to a number of factors, including the increase in the age at which women have children, and the decrease in the number of children born to each woman.

The increase in the number of people aged 65 and over is a global phenomenon. In 1990, there were 0.4 billion people aged 65 and over in the world. By 2050, there are predicted to be 1.1 billion people aged 65 and over in the world (United Nations, 2002). This increase is particularly pronounced in developed countries, where the number of people aged 65 and over is predicted to increase from 0.2 billion in 1990 to 0.6 billion in 2050.

The increase in the number of people aged 65 and over has a number of implications for society. One of the main implications is the increase in the demand for social services. As the number of people aged 65 and over increases, the demand for social services such as housing, healthcare, and social security will also increase. This increase in demand will place a significant strain on government resources.

Another implication is the increase in the need for long-term care. As the number of people aged 65 and over increases, the need for long-term care will also increase. This is because a large proportion of people aged 65 and over will require long-term care in their later years. This need for long-term care will place a significant strain on government resources.

The increase in the number of people aged 65 and over is a challenge for society. It is a challenge that requires a coordinated response from governments, businesses, and individuals. Governments need to increase their spending on social services and long-term care. Businesses need to develop products and services that meet the needs of the aging population. Individuals need to plan for their own retirement and long-term care needs.

There are a number of ways in which society can respond to the increase in the number of people aged 65 and over. One way is to increase the age at which people retire. This would reduce the number of people who are dependent on social security. Another way is to increase the number of people who work in the private sector. This would reduce the demand for social services.

The increase in the number of people aged 65 and over is a challenge for society. It is a challenge that requires a coordinated response from governments, businesses, and individuals. Governments need to increase their spending on social services and long-term care. Businesses need to develop products and services that meet the needs of the aging population. Individuals need to plan for their own retirement and long-term care needs.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the efficiency of the public sector, and to ensure that the public sector is able to deliver the services that are required by the public in a cost-effective manner.

One of the main reasons for the need to improve the efficiency of the public sector is the increasing pressure on public sector budgets. The public sector is now facing a significant budget deficit, and it is essential that the public sector is able to reduce its costs in order to meet its financial obligations.

One of the main ways in which the public sector can reduce its costs is by improving the efficiency of its operations. This can be achieved by a number of measures, including the following:

- Reducing the number of staff employed in the public sector.
- Improving the productivity of staff.
- Reducing the cost of the services provided by the public sector.

One of the main challenges facing the public sector is the need to improve the efficiency of its operations while at the same time maintaining the quality of the services that it provides. This is a difficult task, and it is essential that the public sector is able to find ways of improving its efficiency without compromising the quality of its services.

One of the main ways in which the public sector can improve the efficiency of its operations is by using information technology. Information technology can be used in a number of ways to improve the efficiency of the public sector, including the following:

- Improving the way in which the public sector collects and processes data.
- Improving the way in which the public sector communicates with the public.
- Improving the way in which the public sector manages its resources.

One of the main challenges facing the public sector is the need to improve the efficiency of its operations while at the same time maintaining the quality of the services that it provides. This is a difficult task, and it is essential that the public sector is able to find ways of improving its efficiency without compromising the quality of its services.

One of the main ways in which the public sector can improve the efficiency of its operations is by using information technology. Information technology can be used in a number of ways to improve the efficiency of the public sector, including the following:
