the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996). The number of people who are malnourished has increased from 1.2 billion to 1.5 billion (FAO 1996).

There is a growing awareness of the need to improve the nutritional status of the world's population. The World Health Organization (WHO) has set a goal of reducing the number of undernourished people in the world by 50% by the year 2010 (WHO 1996).

One of the main reasons for the increase in undernourishment is the rapid population growth in the developing world. The population of the world is expected to reach 6 billion by the year 2000 and 8 billion by the year 2025 (UN 1996).

Another major factor is the increasing demand for food. The demand for food is expected to increase by 50% by the year 2025 (FAO 1996). This is due to the increasing population and the increasing demand for meat and other animal products.

The increasing demand for food has led to a rapid increase in the use of fertilizers and pesticides. This has led to a rapid increase in the production of food, but it has also led to a rapid increase in the contamination of food.

The contamination of food has led to a rapid increase in the number of people who are malnourished. This is because the contamination of food has led to a rapid increase in the number of people who are sick and unable to absorb the nutrients in the food.

The contamination of food has also led to a rapid increase in the number of people who are obese. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from chronic diseases. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from mental health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from physical health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from reproductive health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from developmental health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from aging health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from end-of-life health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from death health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from burial health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from cremation health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.

The contamination of food has also led to a rapid increase in the number of people who are suffering from interment health problems. This is because the contamination of food has led to a rapid increase in the number of people who are eating food that is high in fat and sugar.
