the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1995 (Department of Health 1996).

There is a growing emphasis on the need to improve the quality of care in the public sector. The Department of Health (1996) has set out a number of key objectives for the public sector, including the need to improve the quality of care, to reduce waiting times, to improve the efficiency of the system, and to improve the financial performance of the system. The Department of Health (1996) has also set out a number of key principles for the public sector, including the need to be patient-centred, to be transparent, to be accountable, and to be efficient.

The Department of Health (1996) has also set out a number of key strategies for the public sector, including the need to improve the quality of care, to reduce waiting times, to improve the efficiency of the system, and to improve the financial performance of the system.

The Department of Health (1996) has also set out a number of key principles for the public sector, including the need to be patient-centred, to be transparent, to be accountable, and to be efficient.

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase to 3.5 billion by the year 2050.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. As life expectancy increases, the number of children who survive to adulthood increases. This is because more children are surviving to the age of 15, and more children are surviving to the age of 20. This is also true for children who survive to the age of 25 and beyond.

Another factor that is likely to contribute to the increase in the number of children in the world is the increase in the number of children who are born to women who are under 20 years of age. This is because more women are having children at a younger age, and more women are having children who are under 15 years of age. This is also true for women who are having children who are under 20 years of age.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in life expectancy. Another factor that is likely to contribute to the increase in the number of children in the world is the increase in the number of children who are born to women who are under 20 years of age. This is because more women are having children at a younger age, and more women are having children who are under 15 years of age. This is also true for women who are having children who are under 20 years of age.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.4 billion to 0.6 billion (United Nations, 2002). The United Nations predicts that by 2050, the number of people aged 65 and over will have increased to 1.1 billion, and the number of people under 15 years of age will have decreased to 1.1 billion (United Nations, 2002).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 47 years for men and 51 years for women. By 2050, the life expectancy at birth is predicted to be 74 years for men and 79 years for women (United Nations, 2002).

Another factor is the decrease in fertility. In 1990, the total fertility rate was 4.7 children per woman. By 2050, the total fertility rate is predicted to be 1.5 children per woman (United Nations, 2002). This decrease in fertility is likely to be due to a number of factors, including the increase in the age at which women have children, and the increase in the use of contraception.

The increase in the number of people aged 65 and over is likely to have a number of implications for society. One of the main implications is the increase in the demand for social services. As the number of people aged 65 and over increases, the demand for social services such as housing, healthcare, and social care is likely to increase. This is likely to place a significant burden on governments and the private sector.

Another implication is the increase in the demand for financial services. As the number of people aged 65 and over increases, the demand for financial services such as pensions, insurance, and investment services is likely to increase. This is likely to place a significant burden on the financial services industry.

The increase in the number of people aged 65 and over is also likely to have implications for the labour market. As the number of people aged 65 and over increases, the number of people who are able to work is likely to decrease. This is likely to place a significant burden on the labour market, as there will be a shortage of people who are able to work.

The increase in the number of people aged 65 and over is also likely to have implications for the economy. As the number of people aged 65 and over increases, the demand for goods and services is likely to increase. This is likely to place a significant burden on the economy, as there will be a need for more resources to meet the demand.

The increase in the number of people aged 65 and over is also likely to have implications for the environment. As the number of people aged 65 and over increases, the demand for resources such as water, energy, and land is likely to increase. This is likely to place a significant burden on the environment, as there will be a need for more resources to meet the demand.

The increase in the number of people aged 65 and over is also likely to have implications for the culture. As the number of people aged 65 and over increases, the culture is likely to change. This is likely to place a significant burden on the culture, as there will be a need for more resources to meet the demand.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.6 billion, and the number of people aged 65 and over has increased from 0.4 billion to 0.6 billion (United Nations, 2002). The United Nations predicts that by 2050, the number of people aged 65 and over will have increased to 1.1 billion, and the number of people under 15 years of age will have decreased to 1.1 billion (United Nations, 2002).

There are a number of factors that are likely to contribute to the increase in the number of people aged 65 and over. One of the main factors is the increase in life expectancy. In 1990, the life expectancy at birth was 47 years for men and 51 years for women. By 2050, the life expectancy at birth is predicted to be 74 years for men and 79 years for women (United Nations, 2002).

Another factor is the decrease in fertility. In 1990, the total fertility rate was 4.7 children per woman. By 2050, the total fertility rate is predicted to be 1.5 children per woman (United Nations, 2002). This decrease in fertility is due to a number of factors, including the increase in the age at which women have children, the increase in the use of contraception, and the increase in the number of women who are in the workforce.

The increase in the number of people aged 65 and over is likely to have a number of implications for society. One of the main implications is the increase in the demand for social services. As the number of people aged 65 and over increases, the demand for social services such as housing, healthcare, and social security is likely to increase. This is because older people are more likely to need these services than younger people.

Another implication is the increase in the cost of social services. As the number of people aged 65 and over increases, the cost of social services is likely to increase. This is because older people are more likely to need more expensive services than younger people. For example, older people are more likely to need long-term care, which is more expensive than short-term care.

The increase in the number of people aged 65 and over is also likely to have implications for the economy. One of the main implications is the decrease in the labour force. As the number of people aged 65 and over increases, the number of people in the labour force is likely to decrease. This is because older people are more likely to be retired than younger people.

Another implication is the decrease in productivity. As the number of people aged 65 and over increases, the productivity of the labour force is likely to decrease. This is because older people are more likely to be less productive than younger people. For example, older people are more likely to have health problems that can affect their productivity.

The increase in the number of people aged 65 and over is also likely to have implications for the environment. One of the main implications is the increase in the demand for resources. As the number of people aged 65 and over increases, the demand for resources such as water, energy, and land is likely to increase. This is because older people are more likely to need more resources than younger people.

Another implication is the increase in the cost of resources. As the number of people aged 65 and over increases, the cost of resources is likely to increase. This is because older people are more likely to need more expensive resources than younger people. For example, older people are more likely to need more expensive housing, which is more expensive than cheaper housing.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995) and the number of people in the private sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1995).

There is a growing emphasis on the need for the public sector to be more cost-effective and to provide services that are more responsive to the needs of the community. This has led to a number of initiatives to improve the efficiency of the public sector, including the introduction of competition and the restructuring of public services.

The public sector is also facing a number of challenges, including a growing demand for services, a shrinking tax base, and a need to improve the quality of services. These challenges are likely to continue to be a major focus of government policy in the future.

The private sector is also facing a number of challenges, including a growing demand for services, a shrinking tax base, and a need to improve the quality of services. These challenges are likely to continue to be a major focus of government policy in the future.
