the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly. The world population is projected to reach 6 billion by the year 2000, and to reach 8 billion by the year 2025 (UNEP 1992).

Second, the world's population is becoming more urban. In 1990, 50% of the world's population lived in urban areas. By the year 2000, 60% of the world's population is projected to live in urban areas (UNEP 1992).

Third, the world's population is becoming more dependent on food imports. In 1990, 10% of the world's population was dependent on food imports. By the year 2000, 20% of the world's population is projected to be dependent on food imports (UNEP 1992).

Fourth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Fifth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Sixth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Seventh, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Eighth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Ninth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Tenth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Eleventh, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

Twelfth, the world's population is becoming more dependent on food aid. In 1990, 10% of the world's population was dependent on food aid. By the year 2000, 20% of the world's population is projected to be dependent on food aid (UNEP 1992).

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over in the UK is projected to increase from 10.5 million in 1999 to 12.5 million in 2010, with the number of people aged 75 and over increasing from 4.5 million to 5.5 million in the same period (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (2000) has identified the need to develop a 'new paradigm' for the care of the elderly, one that is based on the principles of 'active ageing' and 'positive ageing'. The Department of Health (2000) has identified the need to develop a 'new paradigm' for the care of the elderly, one that is based on the principles of 'active ageing' and 'positive ageing'.
