?

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001). The number of people who are obese has increased from 100 million in 1975 to 300 million in 2000 (WHO 2000).

There is a growing awareness of the need to understand the complex interactions between the environment and the individual in the development of obesity. The environment is defined as the physical and social surroundings of the individual. The physical environment includes the built environment (e.g. housing, roads, public transport, and recreational facilities) and the natural environment (e.g. climate, air quality, and noise). The social environment includes the family, community, and society.

The physical environment can influence the individual's energy balance through its effects on physical activity and energy intake. The built environment can influence physical activity by providing opportunities for walking and cycling. The natural environment can influence energy intake by affecting the availability of food and the quality of the food.

The social environment can influence the individual's energy balance through its effects on physical activity and energy intake. The family can influence physical activity by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity. The community can influence energy intake by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

Society can influence the individual's energy balance through its effects on physical activity and energy intake. Society can influence physical activity by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity. Society can influence energy intake by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

The physical and social environments can interact to influence the individual's energy balance. For example, the built environment can influence physical activity by providing opportunities for walking and cycling, and the social environment can influence physical activity by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

The physical and social environments can also interact to influence energy intake. For example, the natural environment can influence energy intake by affecting the availability of food and the quality of the food, and the social environment can influence energy intake by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

The physical and social environments can also interact to influence the individual's energy balance. For example, the built environment can influence physical activity by providing opportunities for walking and cycling, and the social environment can influence physical activity by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

The physical and social environments can also interact to influence energy intake. For example, the natural environment can influence energy intake by affecting the availability of food and the quality of the food, and the social environment can influence energy intake by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.

The physical and social environments can also interact to influence the individual's energy balance. For example, the built environment can influence physical activity by providing opportunities for walking and cycling, and the social environment can influence physical activity by providing opportunities for physical activity and by influencing the individual's attitudes towards physical activity.
